The **JH Performance B-series boats** are arguably one of the smoothest, driest riding shallow water boats available on the gulf coast today. Superior design of the B-240 has evolved over a decade to create an extremely fuel efficient, versatile boat, allowing anglers to fish anywhere from coastal back bays to miles offshore. The v-nose, sharp entry bow cuts through rough water with ease and allows for an exceptionally smooth ride. This tried and true hull design deflects any wake and keeps you dry in even the roughest, windiest conditions. Through the use of a pocket tunnel, the B-series boats retain great shallow water capability along with stable handling characteristics, all while cruising at speeds with unmatched fuel economy. Low gunnel height and spacious deck design only add to the versatility of this boat. Unprecedented storage capacity in the decks, floor and console create a fishing friendly vessel suitable for any type of fisherman. Over the years, the design of the B-series boats has been well thought out and perfected in a manner that allows each model to be easily outfitted and customized with any type of accessory. Quality of construction through the use of 100% composite hand laid materials, in combination with clean rigging, create an excellent, extremely durable fishing boat that any fisherman can enjoy for years.
