If you have not ridden in one of the **JH Performance Outlaw Series** boats, you must do so immediately! The completely original design of the Outlaw models makes them one of the most unique and versatile shallow water boats on the market. These catamaran hybrids are built around a center pod which maximizes shallow water performance, allows for superior handling, all while retaining a smooth ride in rough water. These boats handle and turn as though they are on rails! At no matter what speed you are traveling, the Outlaw boats make you feel comfortable when turning, without fear of sliding or skipping out. Low gunnel height, in combination with a wide beam and large front deck, create a stable, spacious fishing platform with easy access to fishing gear whether you are in the wading the bay or unloading on the trailer.
